Produto versus Projeto

The screenshot shows the oVirt website in a Mozilla Firefox browser window. The browser's address bar displays "https://www.ovirt.org". The website has a green navigation bar with the oVirt logo and links to Home, Blog, Download, Documentation, Develop, Community, and Search. The main content area features the heading "Open your virtual datacenter" and a green button labeled "Start using oVirt now »". To the right of the heading are three icons with corresponding text: a server rack icon for "oVirt manages virtual machines, storage and virtualized networks.", a globe icon for "oVirt is a virtualization platform with an easy-to-use web interface.", and a penguin icon for "oVirt is powered by the Open Source you know - KVM on Linux." A yellow banner at the bottom of the main content area contains the text "Current release: 4.0.4 (2016-09-26)" and two links: "Read the release notes" and "Get started with oVirt 4.0.4". The footer of the website includes "oVirt News" on the left and "Upcoming events" on the right.

Free & Open Source Systems Management.

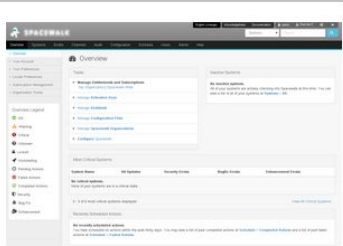

Spacewalk is an open source Linux systems management solution. Spacewalk is the upstream community project from which the Red Hat Satellite product is derived. What are the differences between Spacewalk and Red Hat Satellite? [Read more.](#)

Software Content Management

Spacewalk manages software content updates for Red Hat derived distributions such as Fedora, CentOS, and Scientific Linux, within your firewall. You can stage software content through different environments, managing the deployment of updates to systems and allowing you to view at which update level any given system is at across your deployment. A central web interface allows viewing of systems, their associated software update status, and initiating update actions.

Additional Management Capabilities

Spacewalk also provides provisioning capabilities, allowing you to manage your systems throughout their lifecycle. Via Provisioning, Spacewalk enables you to kickstart provision systems and manage and deploy configuration files. Spacewalk also has virtualization capabilities to enable you to provision, control, manage, and monitor virtual KVM and Xen guests.

What Can Spacewalk Do?

Spacewalk is an open source (GPLV2) Linux systems management solution that allows you to:

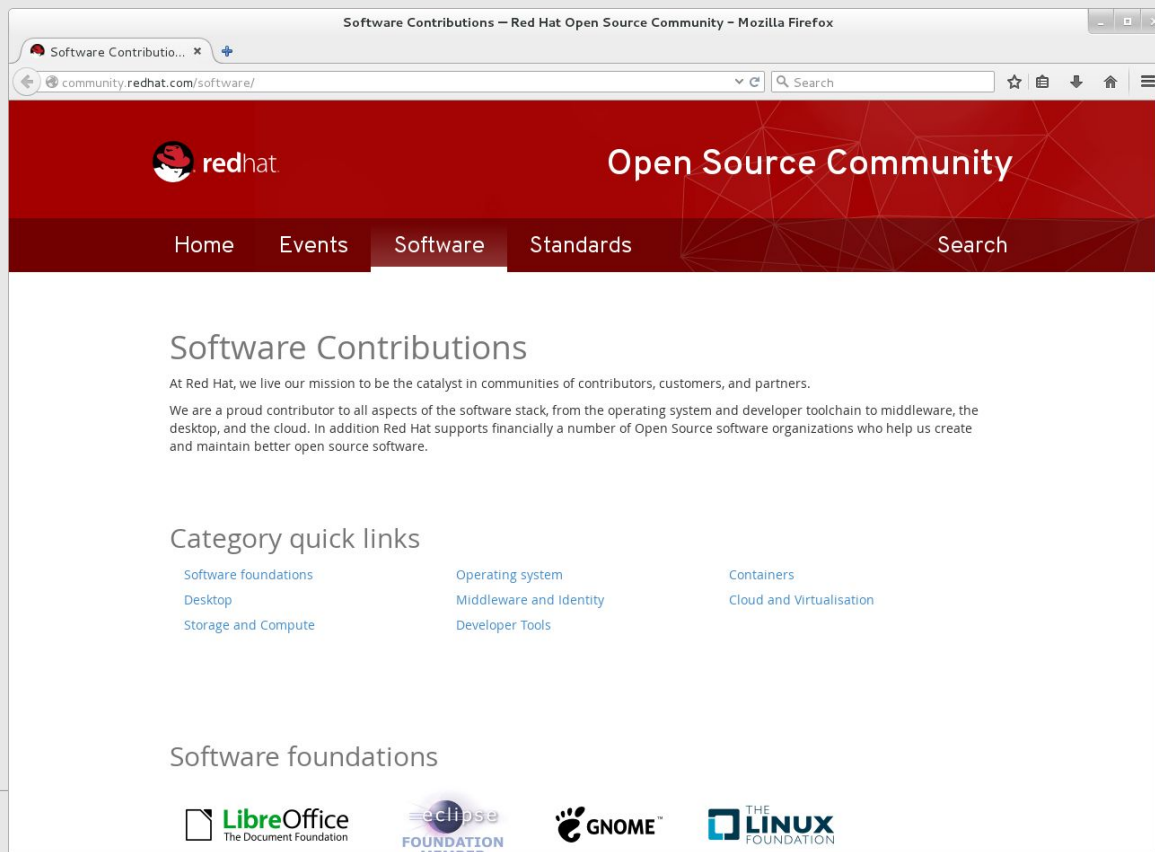

- Inventory your systems (hardware and software information)
- Install and update software on your systems

The screenshot shows a web browser window titled "Software Contributions — Red Hat Open Source Community — Mozilla Firefox". The address bar shows "community.redhat.com/software/". The page has a red header with the Red Hat logo and the text "Open Source Community". Below the header is a navigation bar with links: Home, Events, Software (highlighted), Standards, and Search. The main content area is titled "Software Contributions" and contains the following text:

At Red Hat, we live our mission to be the catalyst in communities of contributors, customers, and partners.

We are a proud contributor to all aspects of the software stack, from the operating system and developer toolchain to middleware, the desktop, and the cloud. In addition Red Hat supports financially a number of Open Source software organizations who help us create and maintain better open source software.

Below this text is a section titled "Category quick links" with a grid of links:

- Software foundations
- Operating system
- Containers
- Desktop
- Middleware and Identity
- Cloud and Virtualisation
- Storage and Compute
- Developer Tools

At the bottom of the page is a section titled "Software foundations" with logos for LibreOffice, Eclipse Foundation, GNOME, and The Linux Foundation. The Red Hat logo is in the bottom right corner.

The screenshot shows the IRCCloud web interface for the #erlang channel. The browser address bar shows the URL `https://irccloud.com/#!/irc.freenode.net:6667/%23erlang`. The interface includes a header with the channel name, user information, and navigation links. The main chat area displays a conversation about Erlang's `assimilate_child` function. The right sidebar shows a list of channels and a members list.

Channel: #erlang Erlang, the programming language

Members: 253

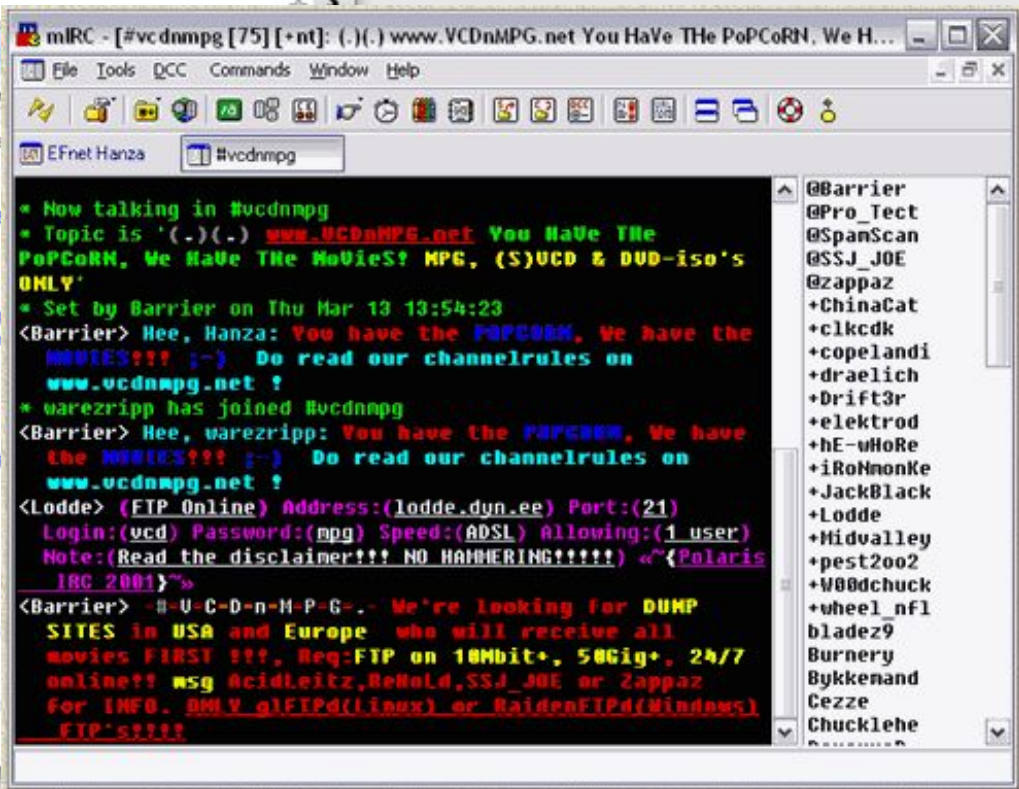

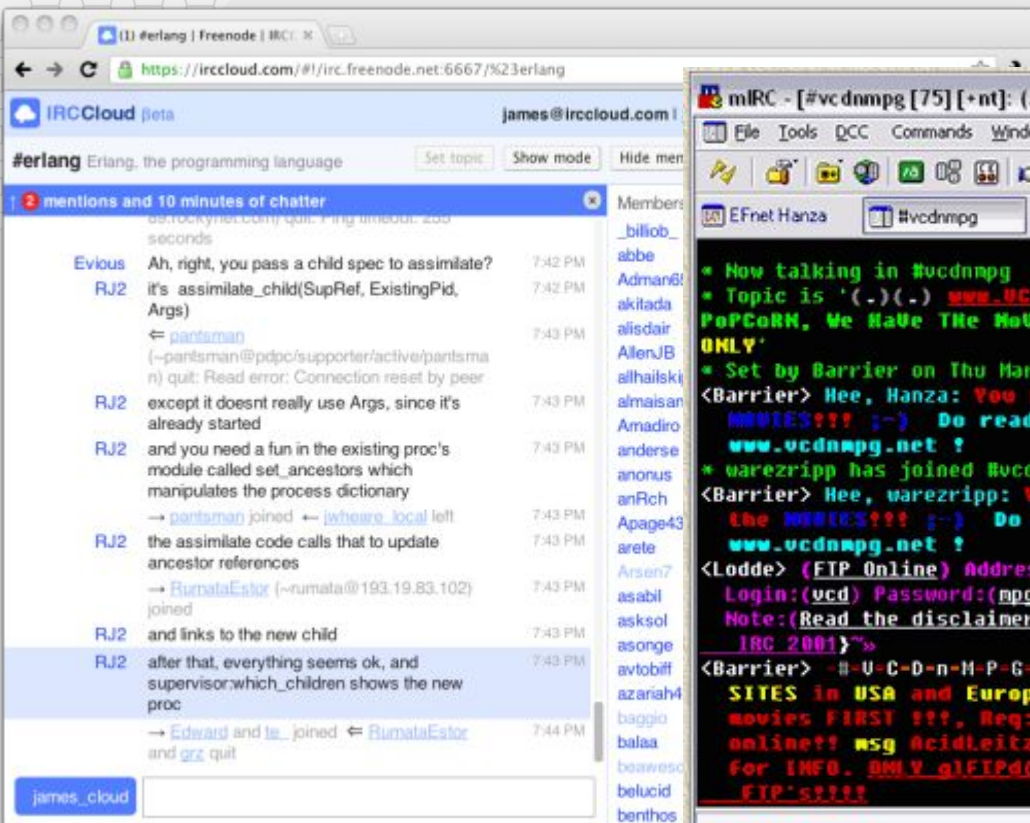

Chat History:

- Evlious:** Ah, right, you pass a child spec to assimilate? 7:42 PM
- RJ2:** it's `assimilate_child(SupRef, ExistingPid, Args)` 7:42 PM
- ← pantsman:** (~pantsman@pdp/supporter/active/pantsman) quit: Read error: Connection reset by peer 7:43 PM
- RJ2:** except it doesnt really use Args, since it's already started 7:43 PM
- RJ2:** and you need a fun in the existing proc's module called `set_ancestors` which manipulates the process dictionary 7:43 PM
- pantsman joined ← where_local left:** 7:43 PM
- RJ2:** the assimilate code calls that to update ancestor references 7:43 PM
- RumataEstor (~rumata@193.19.83.102) joined:** 7:43 PM
- RJ2:** and links to the new child 7:43 PM
- RJ2:** after that, everything seems ok, and `supervisor:which_children` shows the new proc 7:43 PM
- Edward and le_ joined ← RumataEstor and gr_ quit:** 7:44 PM

The screenshot shows the Red Hat Bugzilla Main Page in a Mozilla Firefox browser window. The browser's address bar shows the URL <https://bugzilla.redhat.com>. The page has a red header bar with the title "Red Hat Bugzilla - Main Page" and the version "version 4.4.9039-7". Below the header is a navigation bar with links: Home | New | Search | Front Page | My Bugs | Search [?] | Reports | My Requests | Preferences | Administration | Log out wpinheir@redhat.com. A green advisory box states: "Advisory: Bugzilla is seeing high service demand for some functions. Email notifications are experiencing delays as a result. Please be advised a hotfix is being worked on, there may be several hour delays in message delivery until the fix is implemented." The main content area is divided into two columns. The left column contains sections: "Most Common Actions" with links like "Search existing bug reports", "Enter a new bug report", "Most frequently reported bugs", "Summary reports and charts", "Change password or user preferences", and "Log out wpinheir@redhat.com"; "Quick Search" with a search box and "Quick Search" button; and "Additional Links" with links to "Red Hat Bugzilla User's Guide" and "Release Notes". The right column contains a "Welcome" section with a paragraph about Red Hat Bugzilla, a link to the "Red Hat Customer Portal" for active subscribers, and a note about using "mailing lists" for Fedora Project users. At the bottom, a "Recent changes" section lists updates for Version 4.4.9039 (2015-09-20 UTC), including bug fixes and new features.

Welcome

Thank you for visiting Red Hat Bugzilla. Red Hat Bugzilla is the Red Hat bug-tracking system and is used to submit and review defects that have been found in Red Hat distributions. Red Hat Bugzilla is not an avenue for technical assistance or support, but simply a bug tracking system. If you submit a defect, please provide detailed information in your submission after you have queried Red Hat Bugzilla to ensure the defect has not been reported yet. Defects will go directly to the engineer responsible for the component you filed the defect against. Engineers have many responsibilities and will get to your defect in due time.

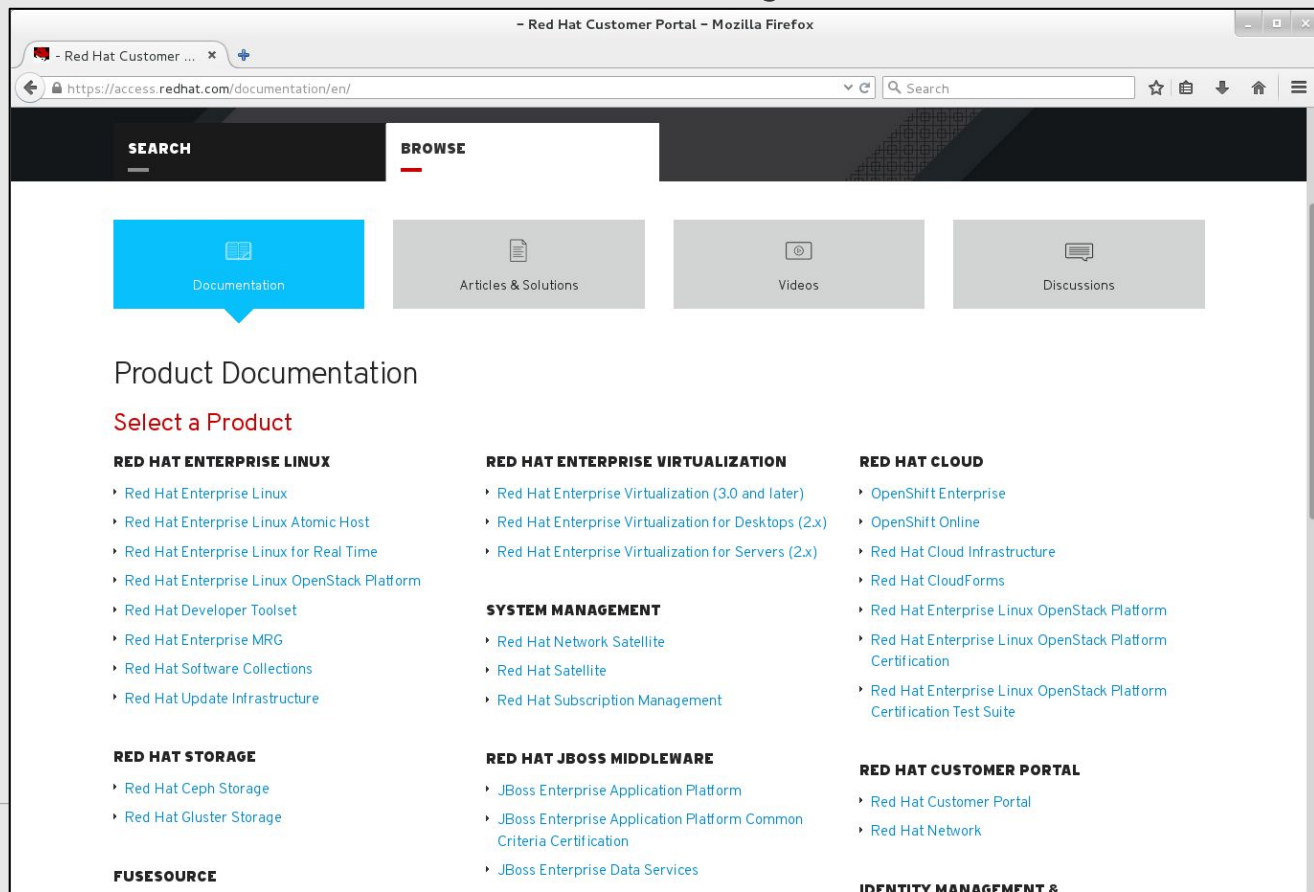

If you are a Red Hat customer with an active subscription, please visit the [Red Hat Customer Portal](#) for assistance with your issue.

If you are a Fedora Project user and require assistance, please consider using one of the [mailing lists](#) we host for the Fedora Project.

Recent changes

- Version 4.4.9039 (2015-09-20 UTC)
 - [Bug 1131812](#): An unprivileged attachment reviewer cannot update the attachment's review flag.
 - [Bug 1136693](#): show_bug.cgi: Subcomponent field does not appear when moving a bug to a new product and component
 - [Bug 1151025](#): Cannot move a bug between products and select more than one component
 - [Bug 1157849](#): [RFE] Use AJAX for the component list when editing and searching bugs
